

THE ADVANTAGES of Porcelain Crowns

A porcelain crown is an extremely versatile treatment which can be used to restore teeth that have been damaged from tooth decay or injury as well as protecting them from further decay. Dental crowns can be used on their own but often they're used in combination with other treatments such as dental bridges and dental implants.

Although this is the same for crowns made from other materials, the further benefits of porcelain crowns to patients are as follows:

LOOKING NATURAL – Porcelain crowns can make a life changing difference in your self-confidence by providing you with a beautiful smile! The material is designed to match the shape, color, and durability of your teeth, making your smile bright and natural.

FEELING NATURAL – Not only will your friends be unable to tell it is porcelain, you won't either. The procedure is designed to match the contours of your mouth and your other teeth, adjusting the crown to your mouth's particular specifications.

RESTORING FUNCTIONALITY – Many cases in which a crown is needed, the tooth is too sensitive or worn for proper functionality. A crown allows for the tooth to be restored and a natural bite and smile reinforced. With the look, feel, and durability of a real tooth, your whole mouth can be returned to its natural, operative state. Porcelain crowns are one of many aesthetic solutions provided by Dental Healing Arts.
