

# The Dangers of Fluoride

While a lot of people think that fluoride prevents tooth decay, most of us don't realize that **fluoride can cause tooth lesions called dental fluorosis and lower overall IQ of the children.**

Harmful effects of fluoride have also been linked to **osteoporosis, thyroid problems, endocrine problems and cancers**, just to name a few.

To benefit your overall health, our water lines in all dental units contain fluoride free / chlorine free, ozonated water.

**Because we care.**
